

Dense classical supersonic modal atlas

770 retained points - one point per page

Fields reconstructed from the frozen pressure mode:

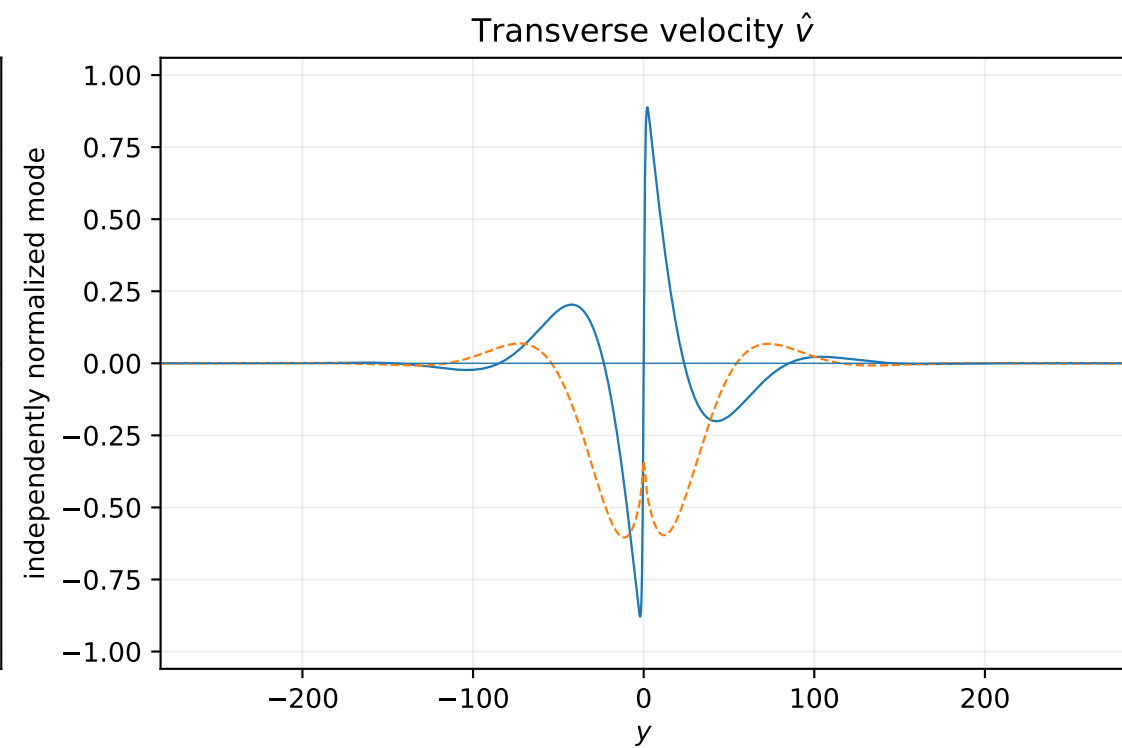

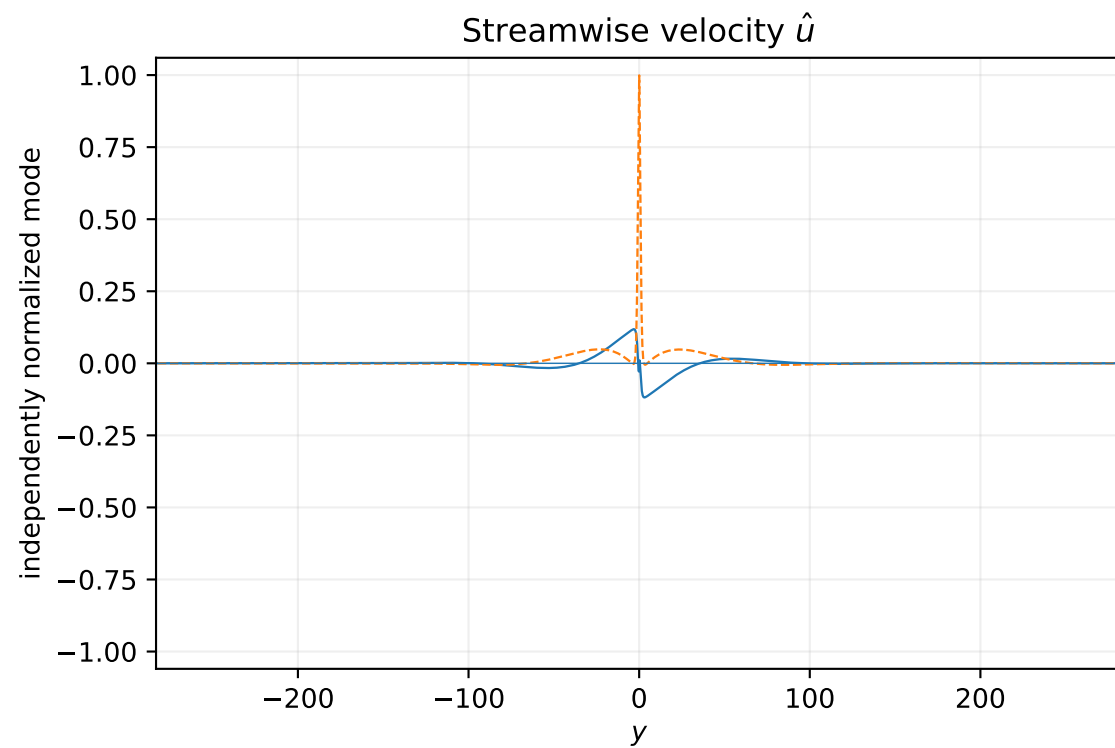

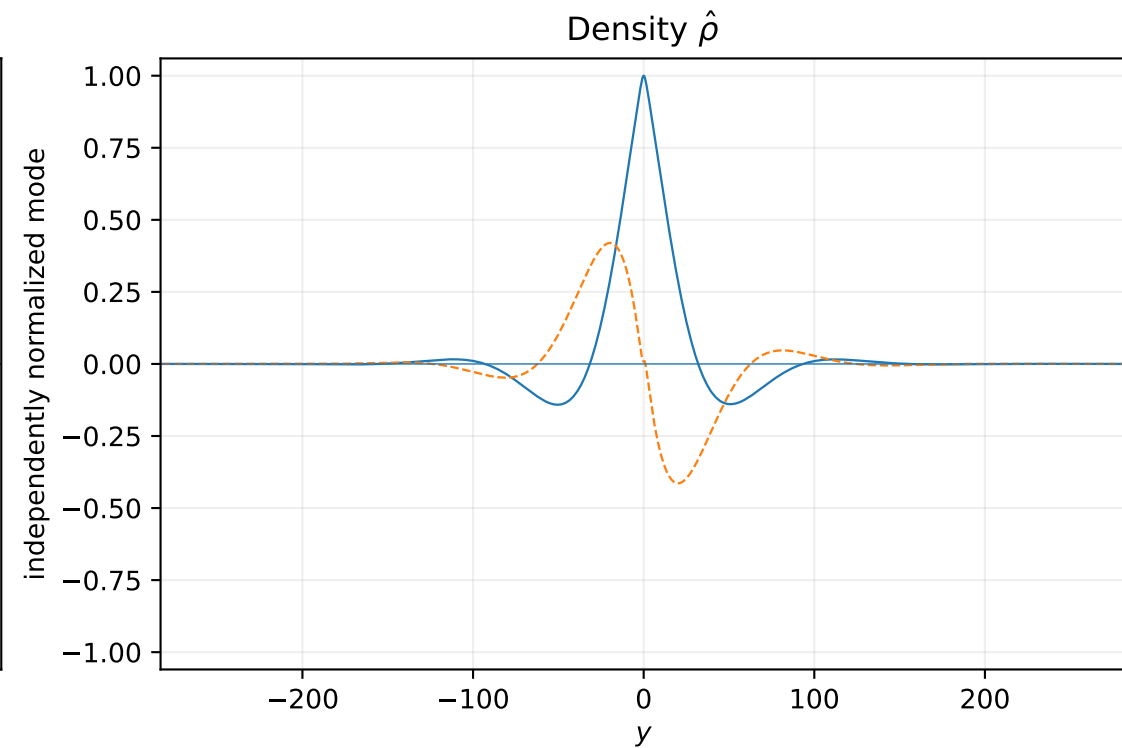

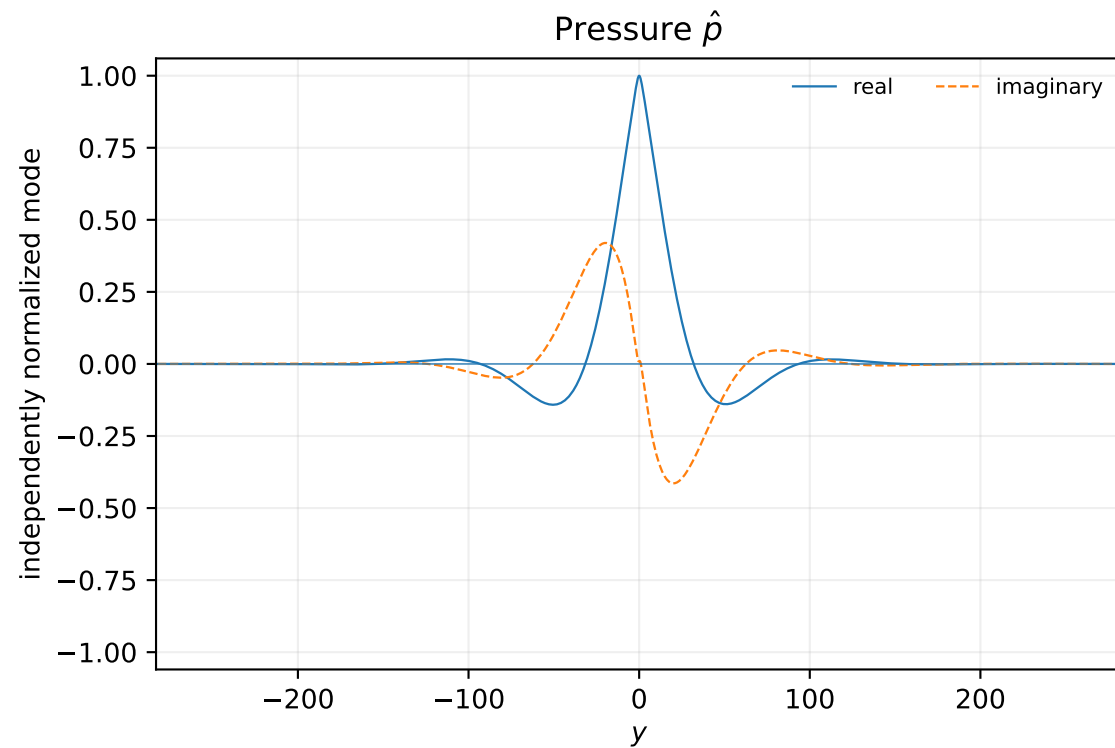

$$\hat{\rho} = M^2 \hat{p}$$

$$\hat{v} = i \hat{p}_y / [\alpha(U - c)]$$

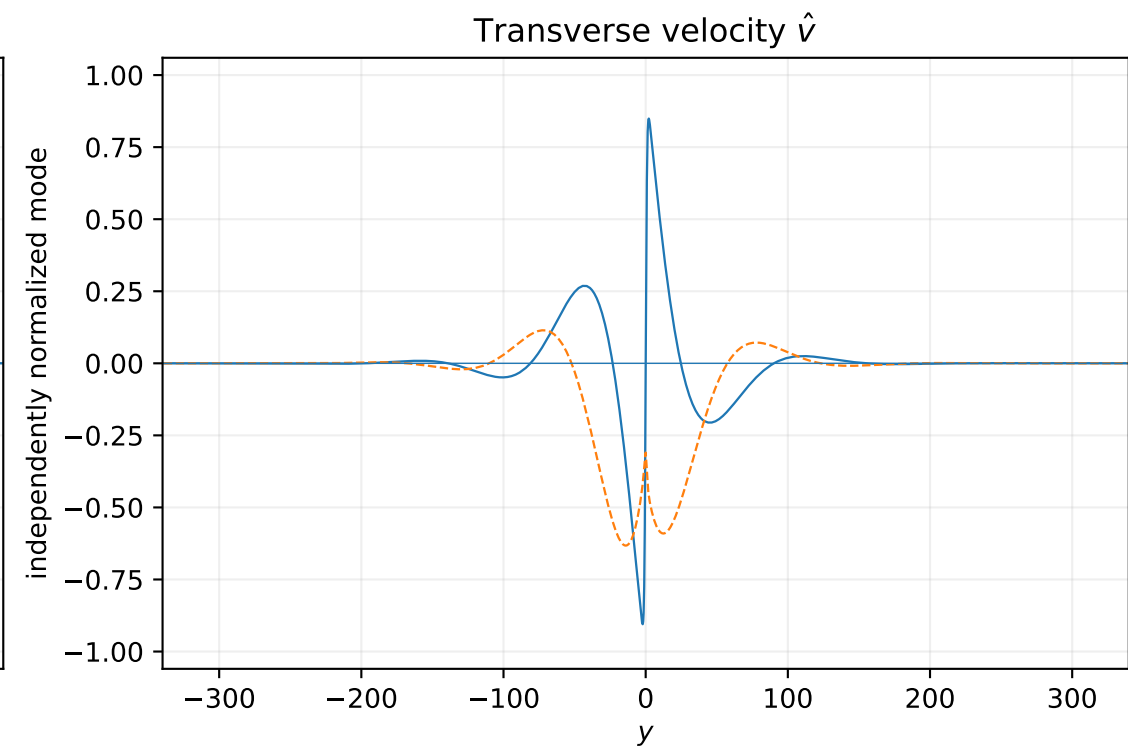

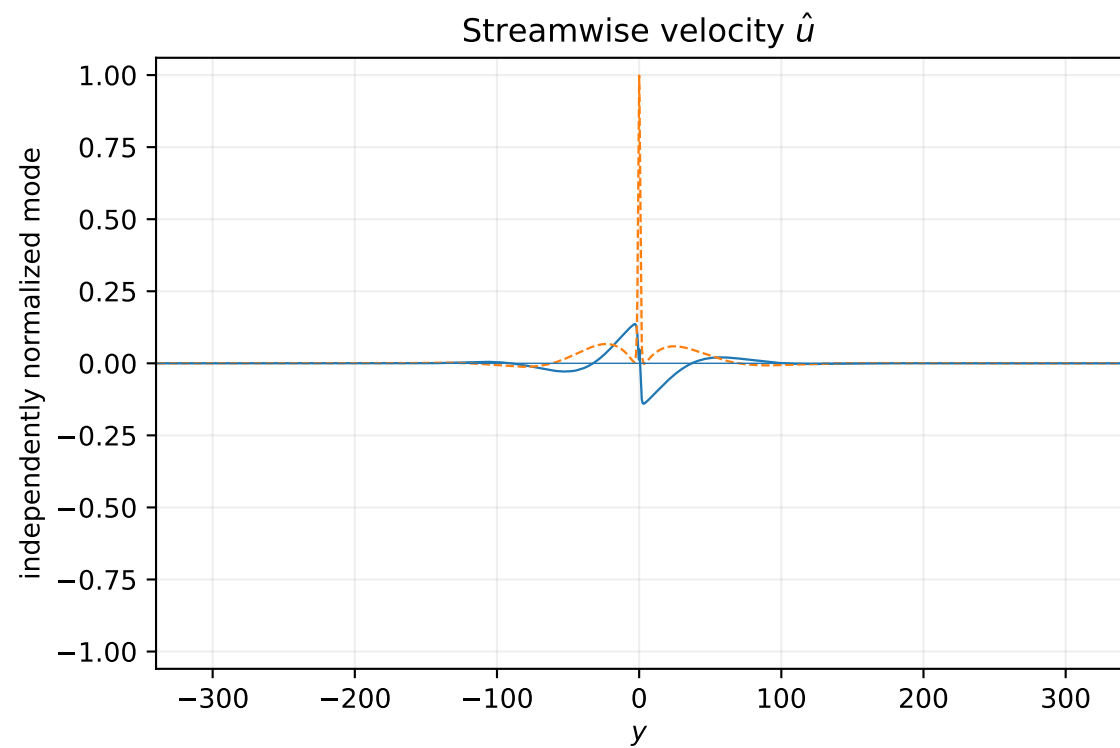

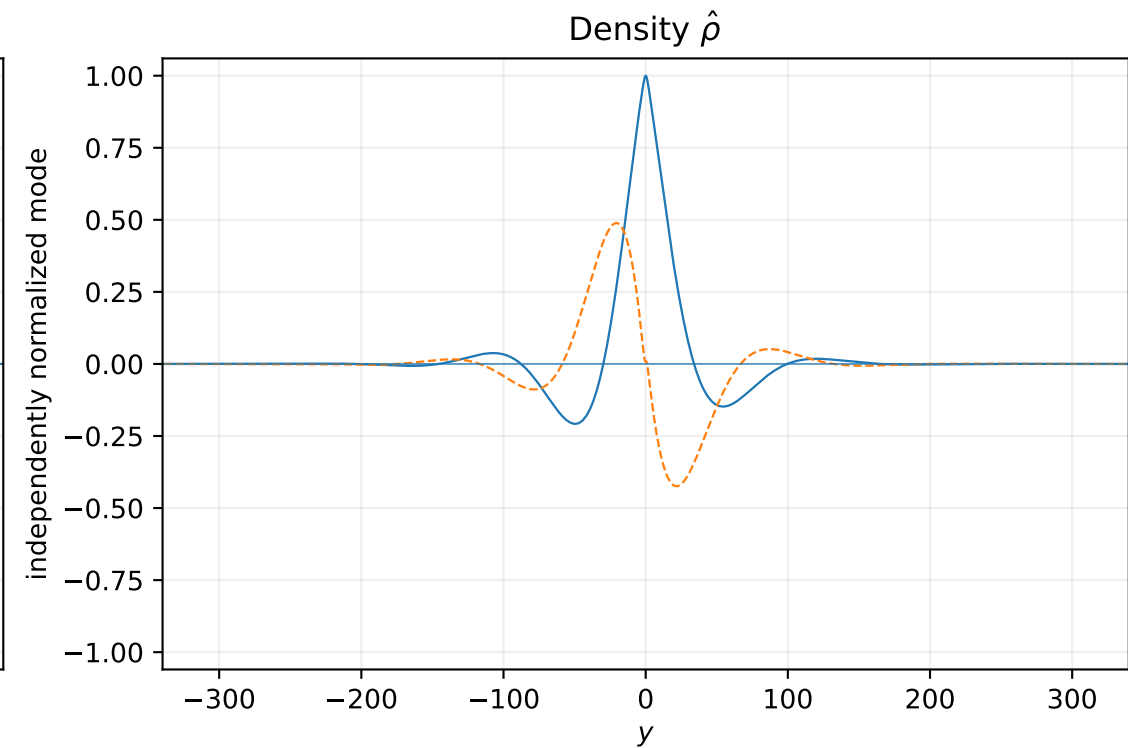

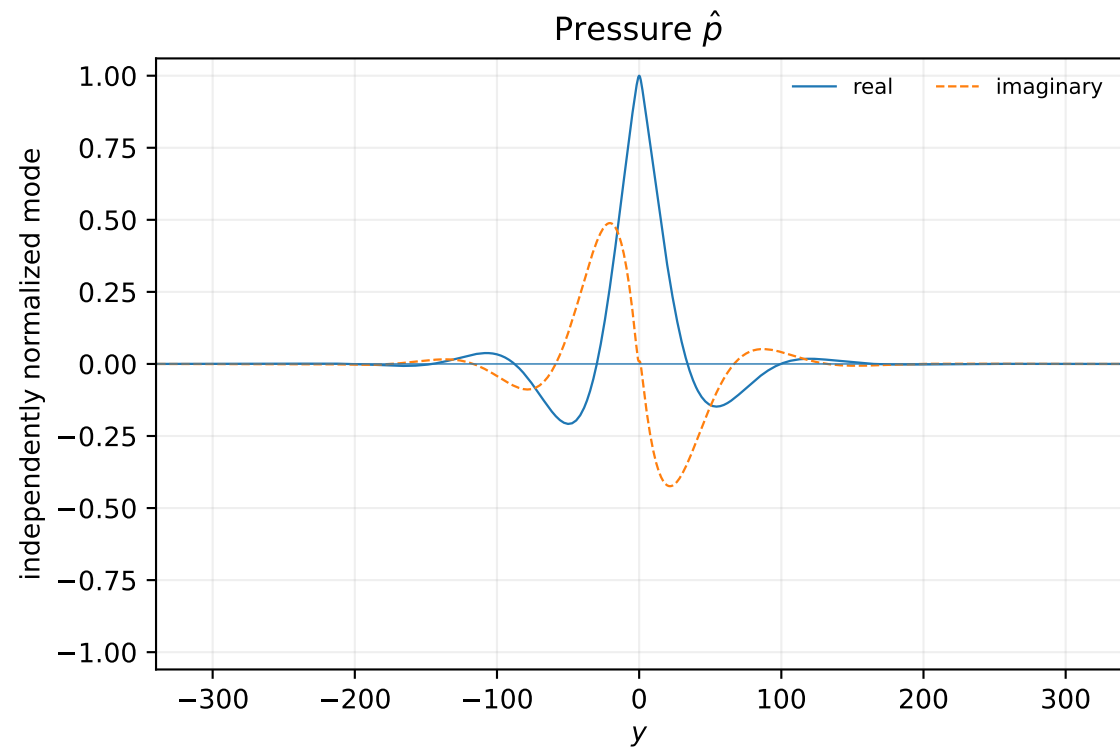

$$\hat{u} = -\hat{p} / (U - c) + i U' \hat{v} / [\alpha(U - c)]$$

Each field is normalized independently. Solid line: real part. Dashed line: imaginary part.
The displayed window is selected from the common active envelope of p, rho, u and v.

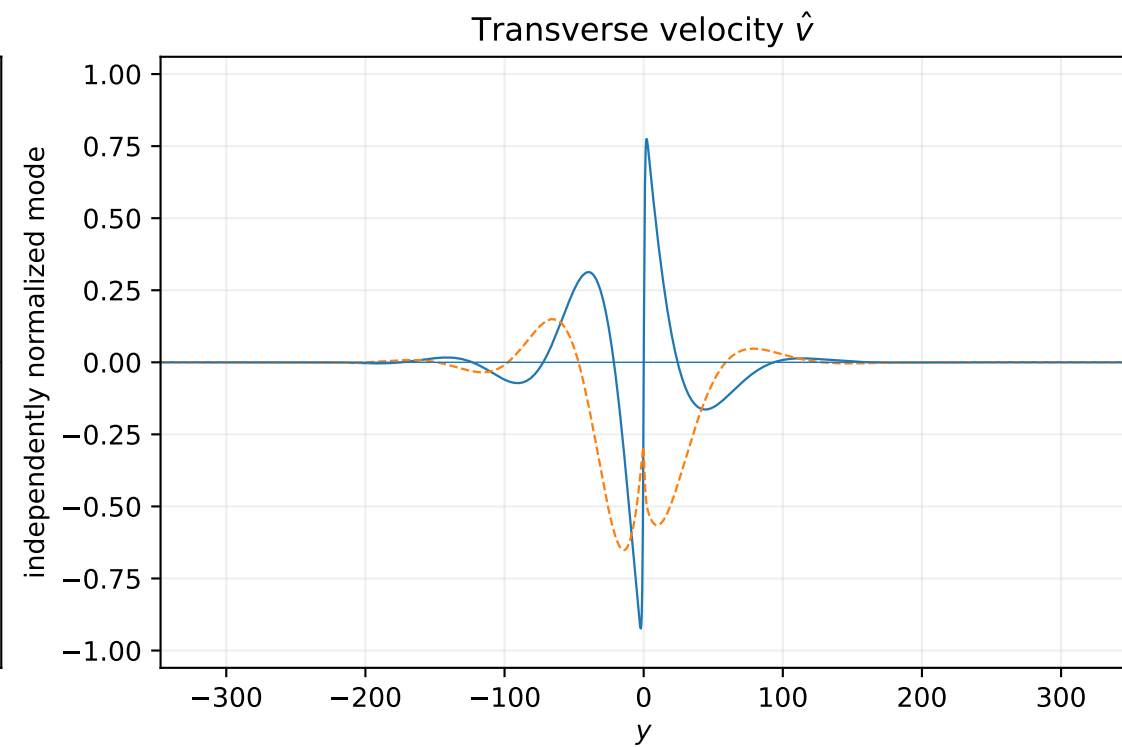

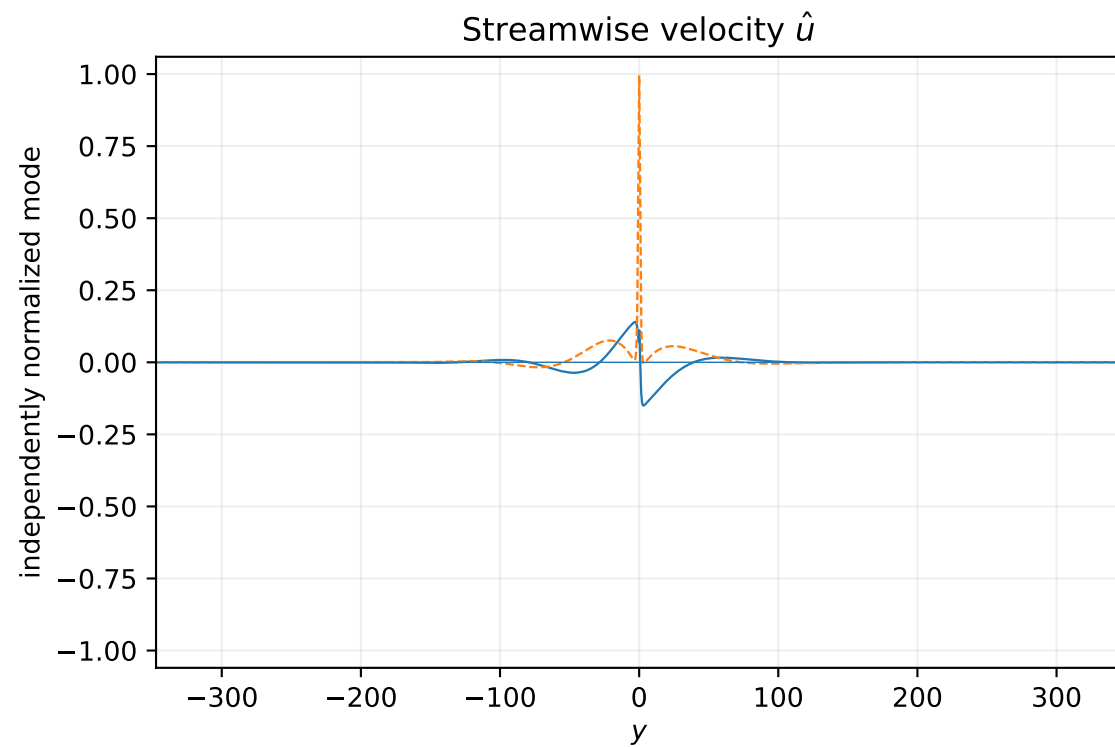

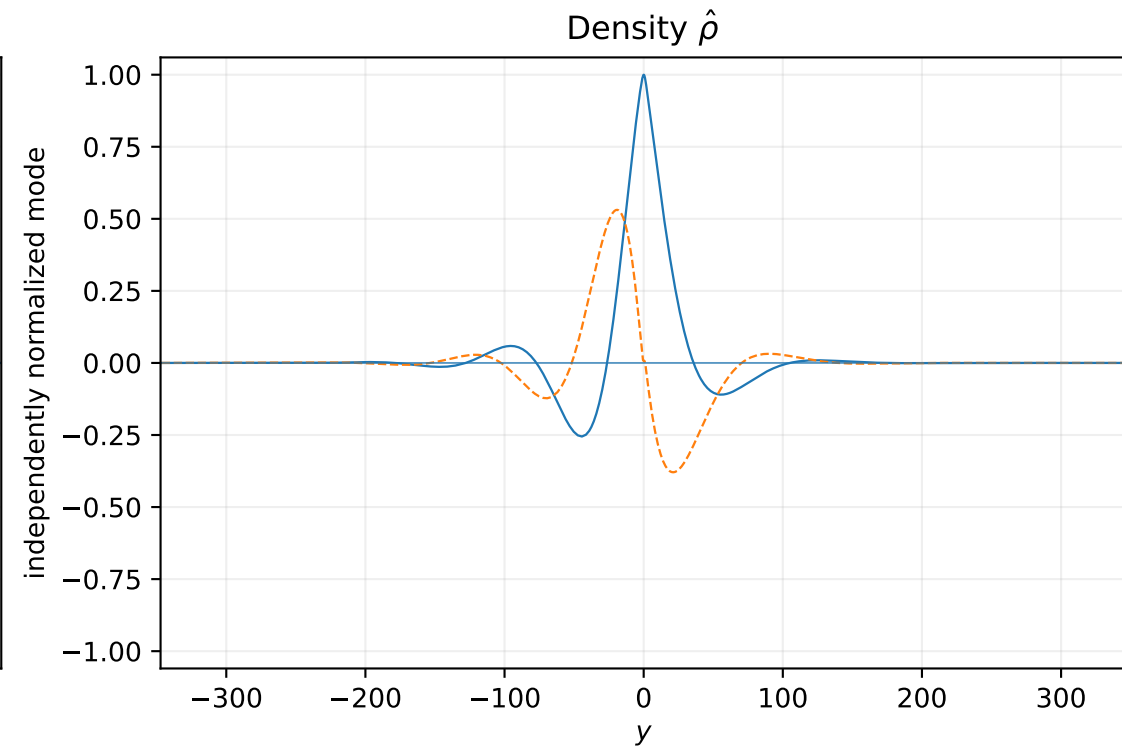

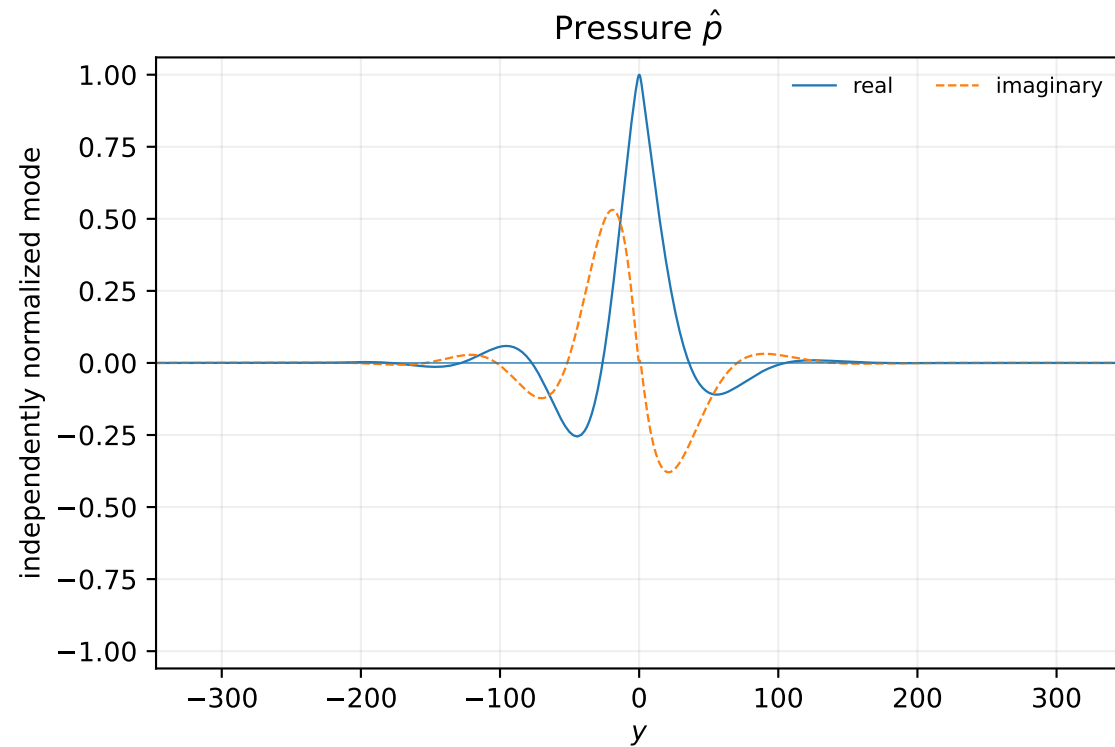

$M = 1.10$, $\alpha = 0.090000$, $c = 0.00000000 + 1.84991912e - 01i$, $\omega_i = 1.66492721e - 02$
point 1/770; displayed $|y| \leq 283.1$
